#### **DETAILED ACTION**

# **Drawings**

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: 323. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

# **Specification**

2. The disclosure is objected to because of the following informalities.

On page 9, line 11, "31" should be "351".

Appropriate correction is required.

#### Claim Objections

3. Claims 7 and 14 are objected to because of the following informalities.

On line 1 of claim 7, "the heat pipe" should be changed to "a heat pipe".

On line 2 of claim 7, "the nip plate" should be changed to "a nip plate".

On line 2 of claim 14, "heating portion" should be changed to "pressing roller".

4. Appropriate correction is required.

## Claim Rejections - 35 USC § 102

5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims 1, 7 and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Foote et al. (US 6,339,211).
- 7. Foote et al. (...211) disclose a fusing device and of an electrophotographic image forming apparatus, the device comprising: a fusing unit (12) which includes a heating portion (col. 5, lines 21-29), a fixing frame (col. 5, lines 31-48) which fixes and supports the heating portion at one side, and a fusing film (104) sliding along a circumference of the fixing frame; and a pressing roller (48) which presses the fusing film to the heating portion to slide the fusing film; wherein the heating portion is in contact with the pressing roller and forms a fusing nip portion having a predetermined width (figure 2). One surface of a heat pipe (102) is closely adhered to a nip plate (100) to transfer heat to the nip plate. A method of fusing an electrophotographic image in an image forming apparatus, the method comprising: heating a heating portion contiguous to a path over which a material having an electrophotographic image passes (col. 4, lines 44-54; and col. 5, lines 21-29); fixing an supporting a fixing frame to facilitate sliding a

Art Unit: 2852

fusing film along a circumference of the fixing frame (col. 5, lines 31-48); and pressing the fusing film to the heating portion to slide the fusing film so that a fusing nip portion having a predetermined width is formed (figure 2).

## Claim Rejections - 35 USC § 103

- 8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 9. Claims 5, 6 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Foote et al. (US 6,339,211) in view of Okabayashi et al. (US 5,999,764).
- 10. Foote et al. (...211) disclose the features mentioned previously, but do not disclose the claimed heater that heats the pressing roller. Okabayashi et al. (...764) disclose a fusing device and method including a heater (37) that heats a pressing roller, and is placed inside the pressing roller. The heater is a halogen lamp (col. 3, line 67 – col. 4, line 3). It would have been obvious to one of ordinary skill in the art at the time of the invention to have the claimed heater that heats the pressing roller, as disclosed by Okabayashi et al. (...764), since such is well known in the art to heat a fusing nipping area to a uniform temperature.

11. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Foote et al. (us 6,339,211) in view of Kawata et al. (US 5,932,125).

12. Foote et al. (...211) disclose the features mentioned previously, but do not disclose manufacturing the fixing frame by injection molding. Kawata et al. (...125) disclose manufacturing a fixing component by injection molding (col. 3, lines 14-17). It would have been obvious to one of ordinary skill in the art at the time of the invention to have the fixing frame by injection molding, as disclosed by Kawata et al. (...125), since it is well known in the art to use this manufacturing technique to form an element in a fusing device.

## Allowable Subject Matter

13. Claims 2-4, 10-13 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

#### Prior Art

14. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Okuda et al. (US 5,365,314), Ohtsuka et al. (US 5,860,052), Yamazaki (US 6,040,558), Kinouchi et al. (US 6,137,985), Kanari et al. (US 6,185,383) and Izawa et al. (US 6,713,725) disclose a fusing device and method.

# Inquiry

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sandra L. Brase whose telephone number is (571) 272-2131. The examiner can normally be reached on Monday-Thursday and alternate Fridays.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Arthur T. Grimley, can be reached on (571) 272-2136. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
